

ARCHITECTURAL SOLAR POWERED LIGHTING

Clarté Lighting offers 100% of our product offering in 12V or 24V DC version to hook up directly to the DC power created and supplied directly from solar panels.

This includes all PAR8 scale, PAR16 scale, PAR20 scale, PAR30 scale and PAR38 scale recessed, recessed slot multiple, surface, and track mounted LED product offerings.

By adding DC to any standard Clarté Lighting part dimming part number D (DDC) and selecting either 12V or 24V, will allow any Clarté fixtures to be powered directly from solar panels, without an inverter.
